# Design meets privacy

Obscura™ is a range of decorative patterned glass providing not only a broad range of thicknesses, styles and surface textures, but also different levels of light diffusion, privacy and obscuration.

### Applications

- Bathroom enclosures
- Door inserts
- Interior partitions
- Lead lights
- Windows for decoration and privacy

### Benefits

- Contemporary and cost effective
- Can be toughened or laminated
- Readily available
- Easy to clean
- Resistant to marking and scratching

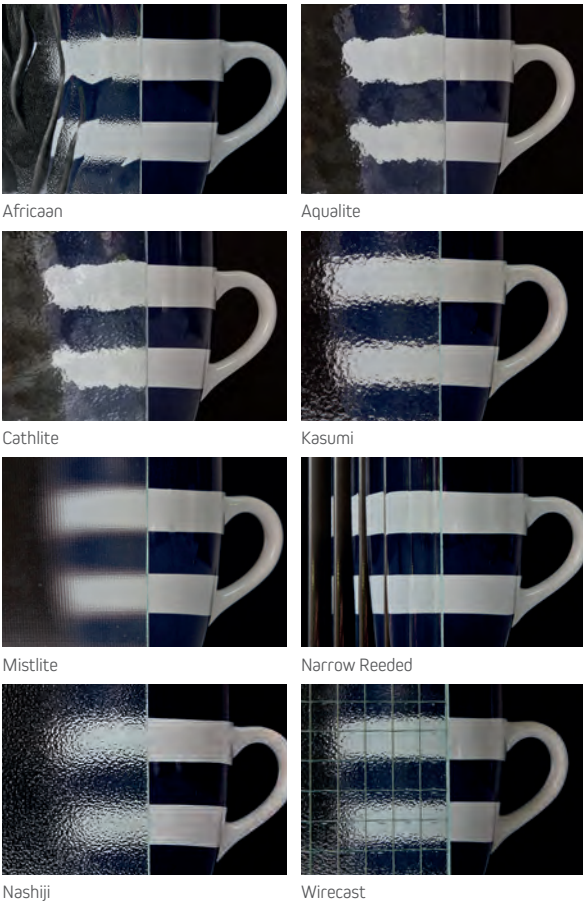

Each Obscura™ pattern is as individual as it is practical. Obscura™ is readily available in a number of different thicknesses from 4mm through 10mm and remains one of the most relevant and cost effective ways of providing design options with either antique or modern décor.

## Levels of obscurity

Obscura™ is manufactured in the traditional way of rolling molten glass through twin rollers, which results in a permanent imprint on one of the glass surfaces being created when the glass has cooled.

It offers a range of different levels of obscurity and privacy, from Level 1 for most obscuration, appropriate for applications where privacy is most important such as bathroom windows or room dividers through to Level 2 for least obscuration, where a diffuse, subtle level of obscuration is desired.

Regardless of the level of obscurity, each product in the range retains high levels of light transmission.
